**Voltage:** 240V

**Supplies:** Foam & Sanding Pads, Nozzle Extenders, Center Hub, CQ Chip

**Settings:** 10 seconds and 30 seconds

**RRP:** call for pricing

The Quicksand is the newest product in the line up of disc repair equipment from VenMill Industries. This machine uses HydroOptic sanding technology to remove heavy scratches in 10 seconds, leaving the surface of the disc smooth and ready to be finished in a polisher or buffer. While the Quicksand may be used in conjunction with any commercial or industrial disc repair machines, this pre-sander is designed to pair with the Hybrid, 2550 and 3550 models from VenMill Industries. The machine features an optional Heavy setting (30 seconds) which works optimally with the Hybrid.
